Disaster Risk Communication, Stakeholder Engagement and Coordination

Communicating Effectively - Reducing Risk - Saving Life

HAFIZ AMIRROL • Head, Strategic Planning, MERCY Malaysia

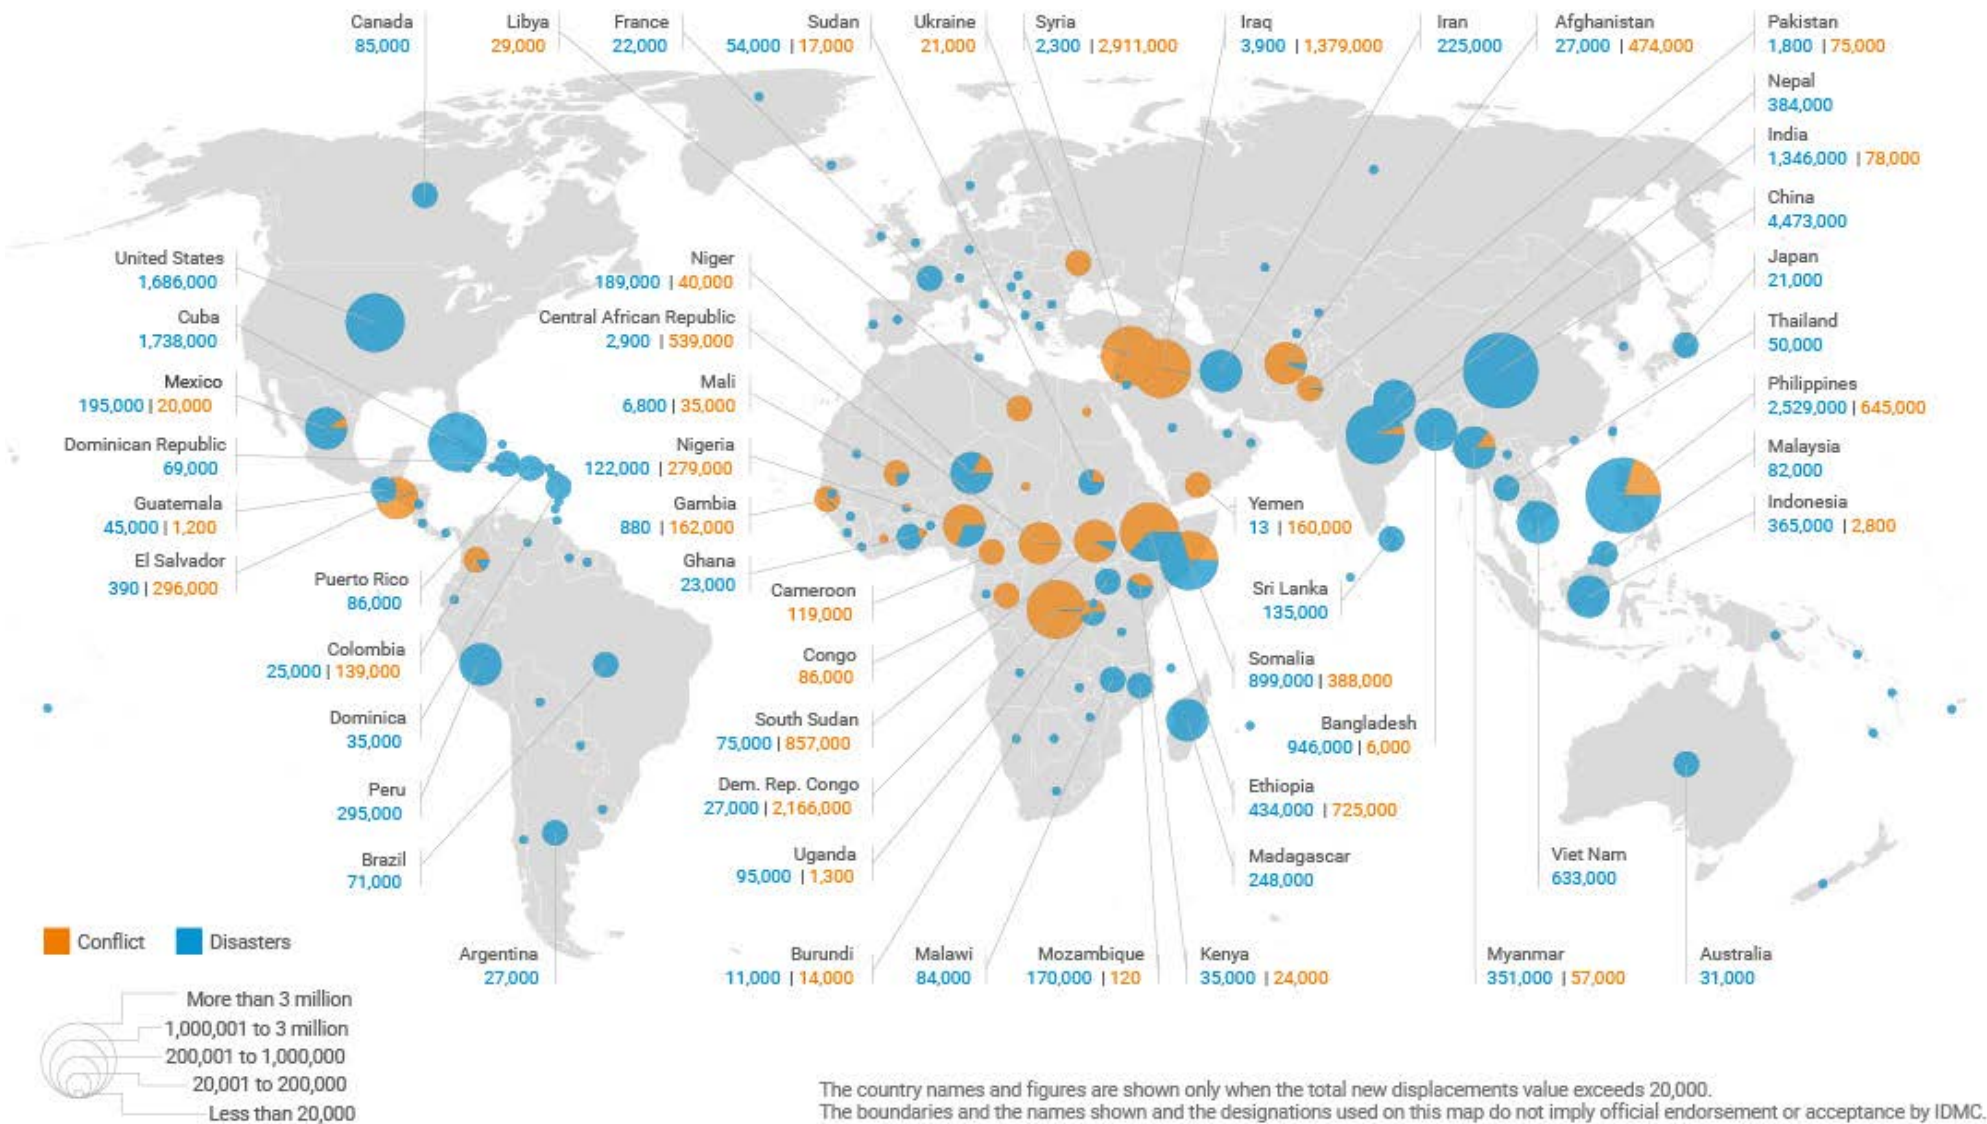

Kobe University UNESCO Chair Summer Program on Gender and Vulnerability in Disaster Risk Reduction Support

Universitas Gadjah Mada, Yogyakarta, Indonesia

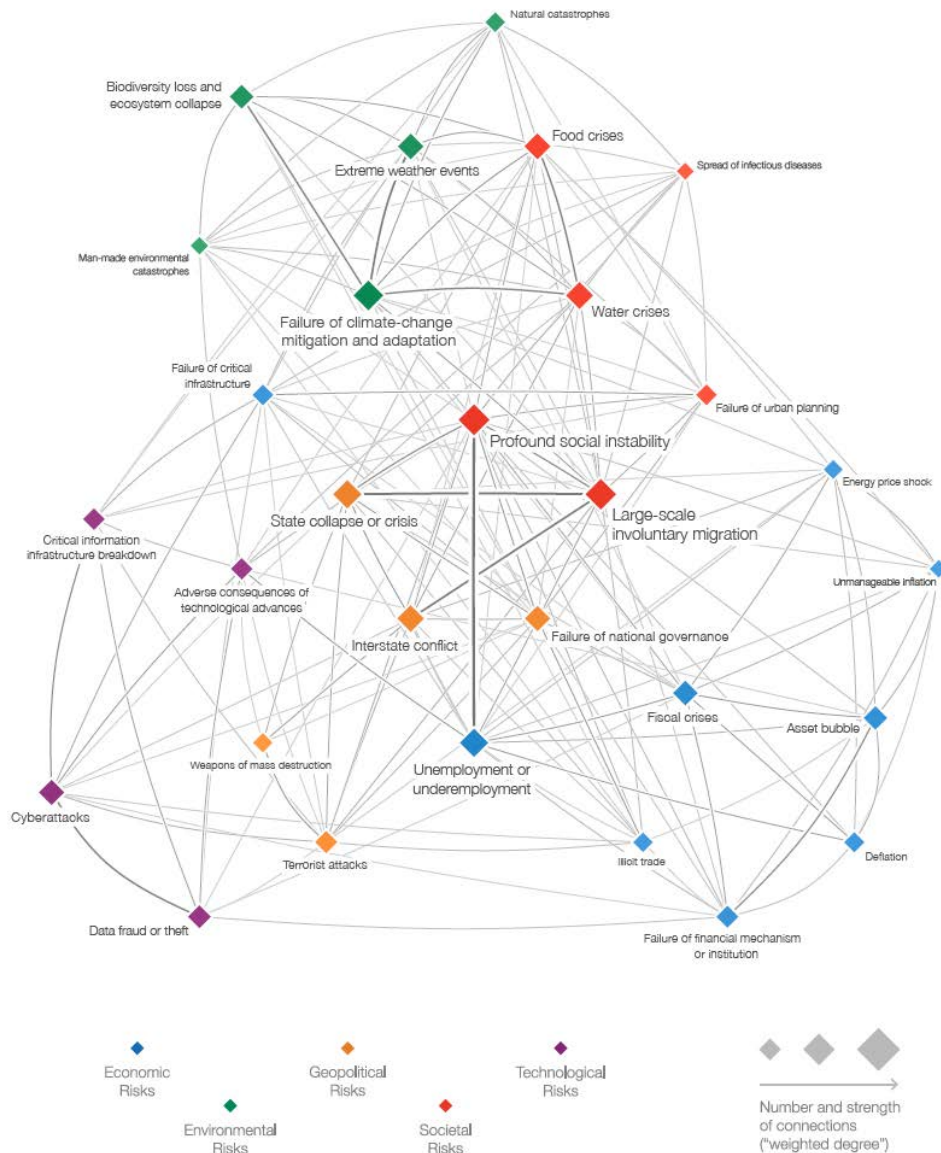

26 August 2019

INTRODUCTION

Complex conflicts and disasters – complex information

Global risks interconnection – a communication nightmare?

Communication types:

1. Verbal
2. Non-verbal
3. Written
4. Visual

Communication challenges:

1. Information overload
2. Hoax and fake information
3. Language
4. Technology
5. One-way, lack feedback
6. Lack engagement
7. Poor content
8. Not timely
9. Badly managed, without strategies
10. ...and many more

COMMUNICATION

Disaster Risk Communication – why is it important?

**Knowledge
and information
provider**

**Knowledge
and information
repository**

**Knowledge
and information
recipient**

Disaster Risk Communication – my 3 picks

SOCIAL NETWORKING SERVICE / SYSTEM

Made behavioral changes drastically and systematically on governments as well as various stakeholders

Behavioral change

No negative impact on the environment

Environmental friendliness

SNS can help reduce deaths and affected people through preparedness and situational information

Number of death/affected people

Economic loss

Reducing disaster economic loss can be done through better targeting of recipients

Cost effectiveness

Achieved through better planning due to more data is available

Level of application/penetration

Have been used world widely

Disaster Risk Communication – my 3 picks

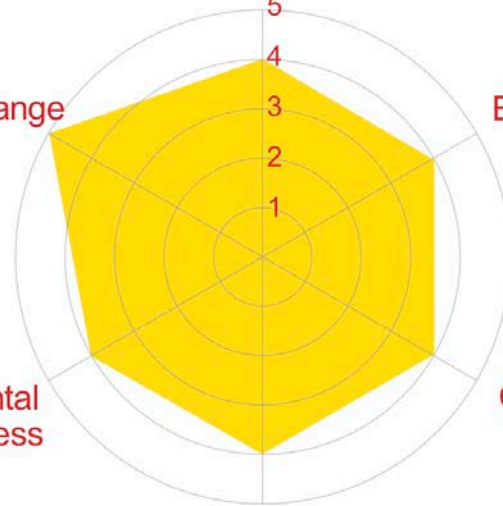

COMMUNITY BASED DRR/DRM

With involvement of communities, risk reduction efforts can be much strengthened

Number of death/affected people

5
4
3
2
1

Can increase participation of communities and mindset

Behavioral change

Economic loss

Protection of assets and property through DRR actions

Require stable start-up cost, but can be easily scaled-up by communities

Cost effectiveness

Negative impact on the environment can be reduced by involvement of local communities and leaders

Environmental friendliness

Level of application/penetration

Some places such as in Philippines and Indonesia have showed good acceptance (other places still require buy-ins)

Disaster Risk Communication – my 3 picks

NATIONAL PLATFORMS FOR DRR

Will increase participation in DRR activities from the private sector, media and academia

Led the development of a new partnership and initiative to reduce number of death and affected people

May not have directly contributed to reducing economic loss but contributed to strengthen response capacity among various stakeholders

No negative impact on the environment

Behavioral change

Environmental friendliness

Level of application/penetration

For government to understand its value of multi-stakeholder involvement

64 countries has so far developed this platform. **Malaysia has the myDRR platform**, but much effort is needed improve this platform.

Of course there are a lot more to disaster risk communication

OTHER IMPORTANCE OF RISK COMMUNICATIONS

1. Raise awareness;
2. Encourage protective behavior;
3. Inform to build up knowledge on hazards and risks;
4. Inform to promote acceptance of risks and management measures;
5. Inform on how to behave during events;
6. Warn of and trigger action to impending and current events;
7. Reassure the audience (to reduce anxiety or 'manage' outrage);
8. Improve relationships (build trust, cooperation, networks);
9. Enable mutual dialogue and understanding;
10. Involve actors in decision-making.

STAKEHOLDER ENGAGEMENT

Stakeholder?

Stakeholder: persons or groups who are directly or indirectly affected by an intervention, as well as those who may have stakes in a project and/or the ability to influence its outcome, either positively or negatively.

Stakeholder?

Stakeholder involvement should ideally foster a **two-way dialogue, and be **conducted in good faith**, and be **responsive**.**

**Managing oneself/ a small group/
community, before/ during/ after
the event of disaster in a
systematically way.**

**No matter where in the world
disaster strikes, disaster
management is all about your
stakeholder.**

**Affected
Individuals**

**Special Needs
Individuals**

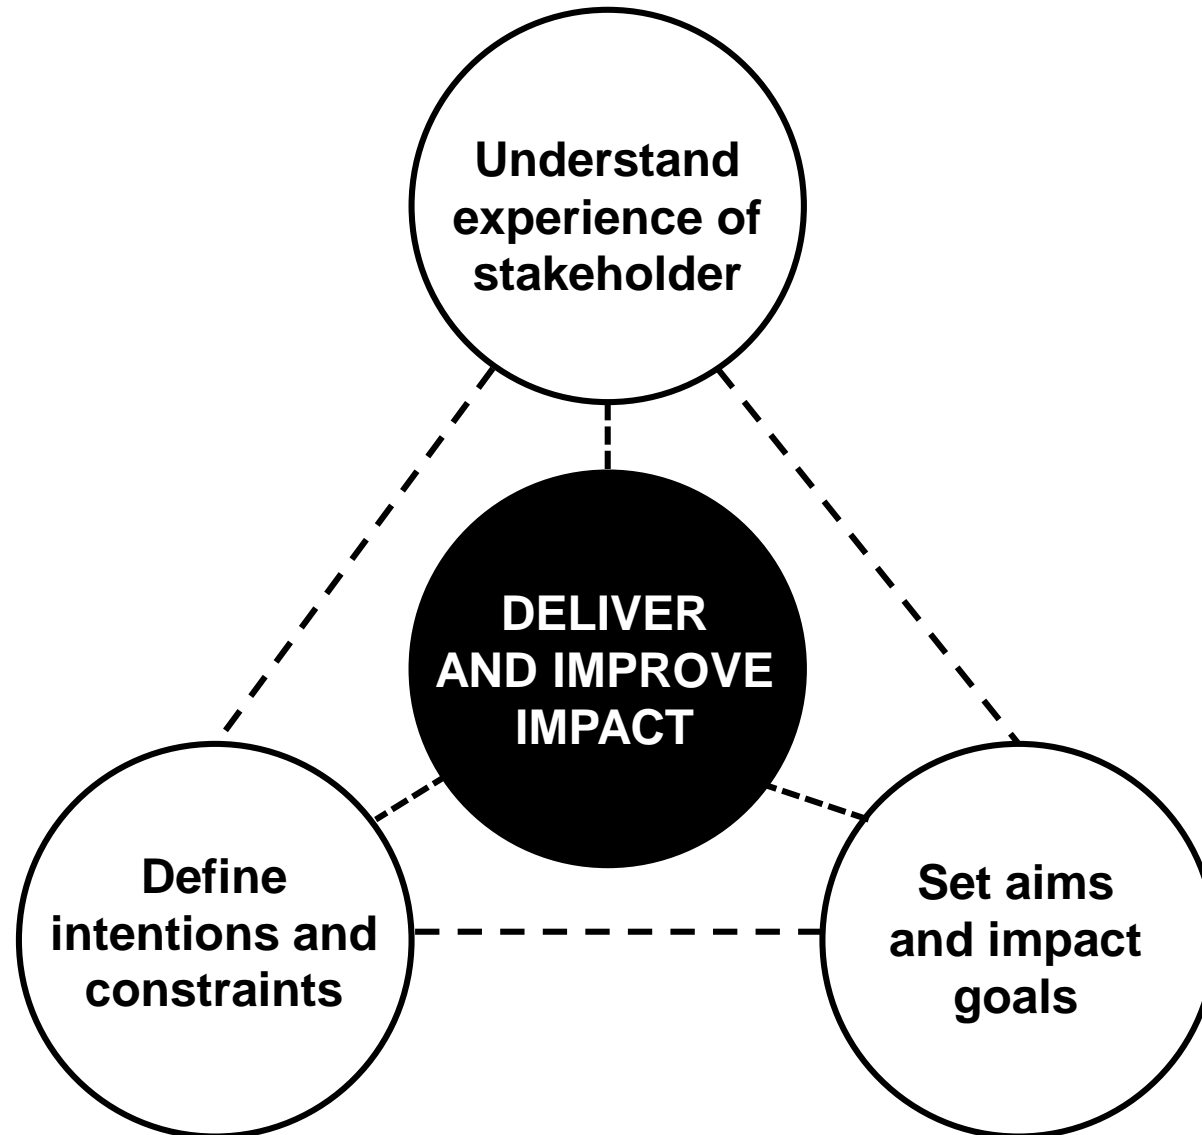

**First
Responders**

**Recovery
Workers**

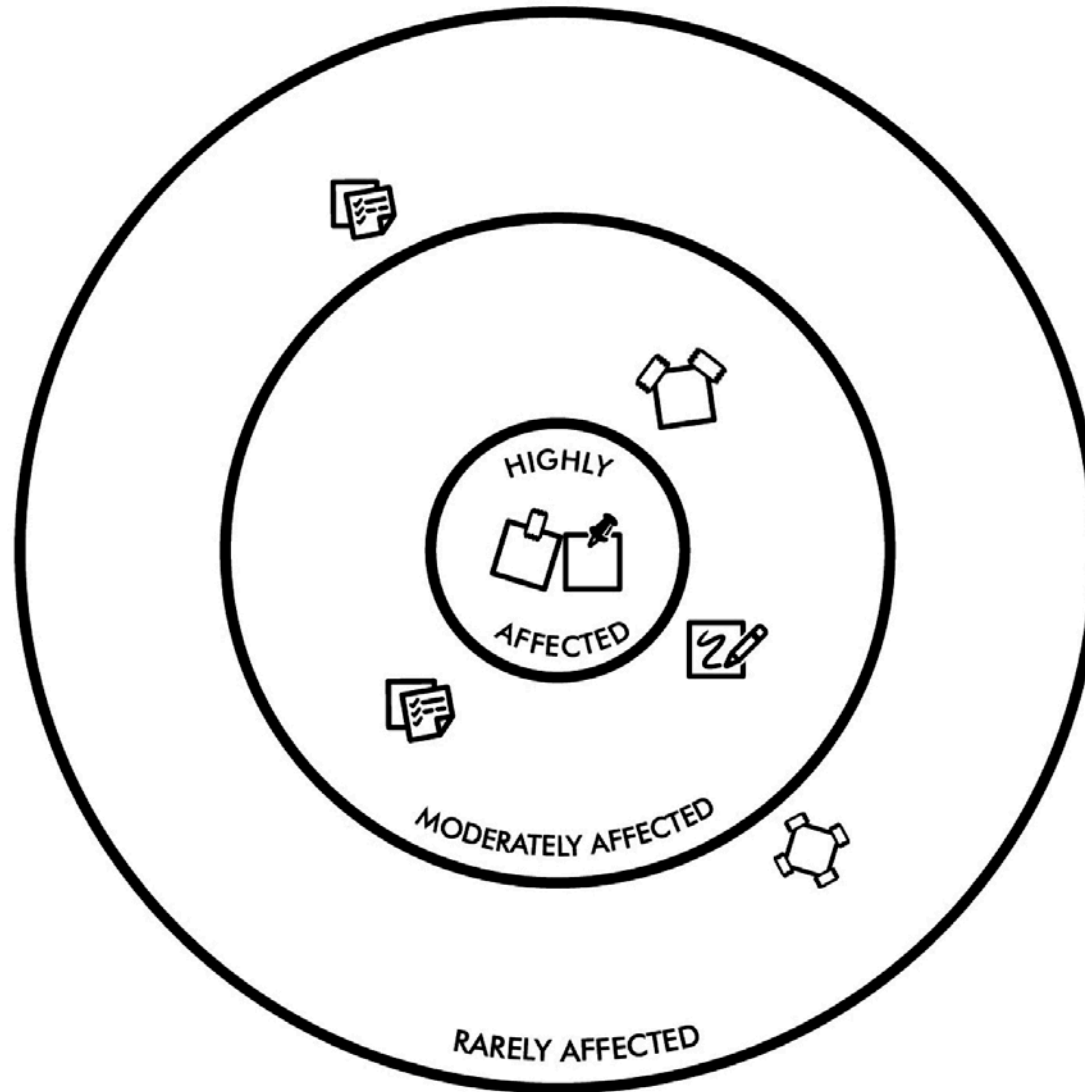

Volunteers

STAKEHOLDER = SOCIAL CAPITAL

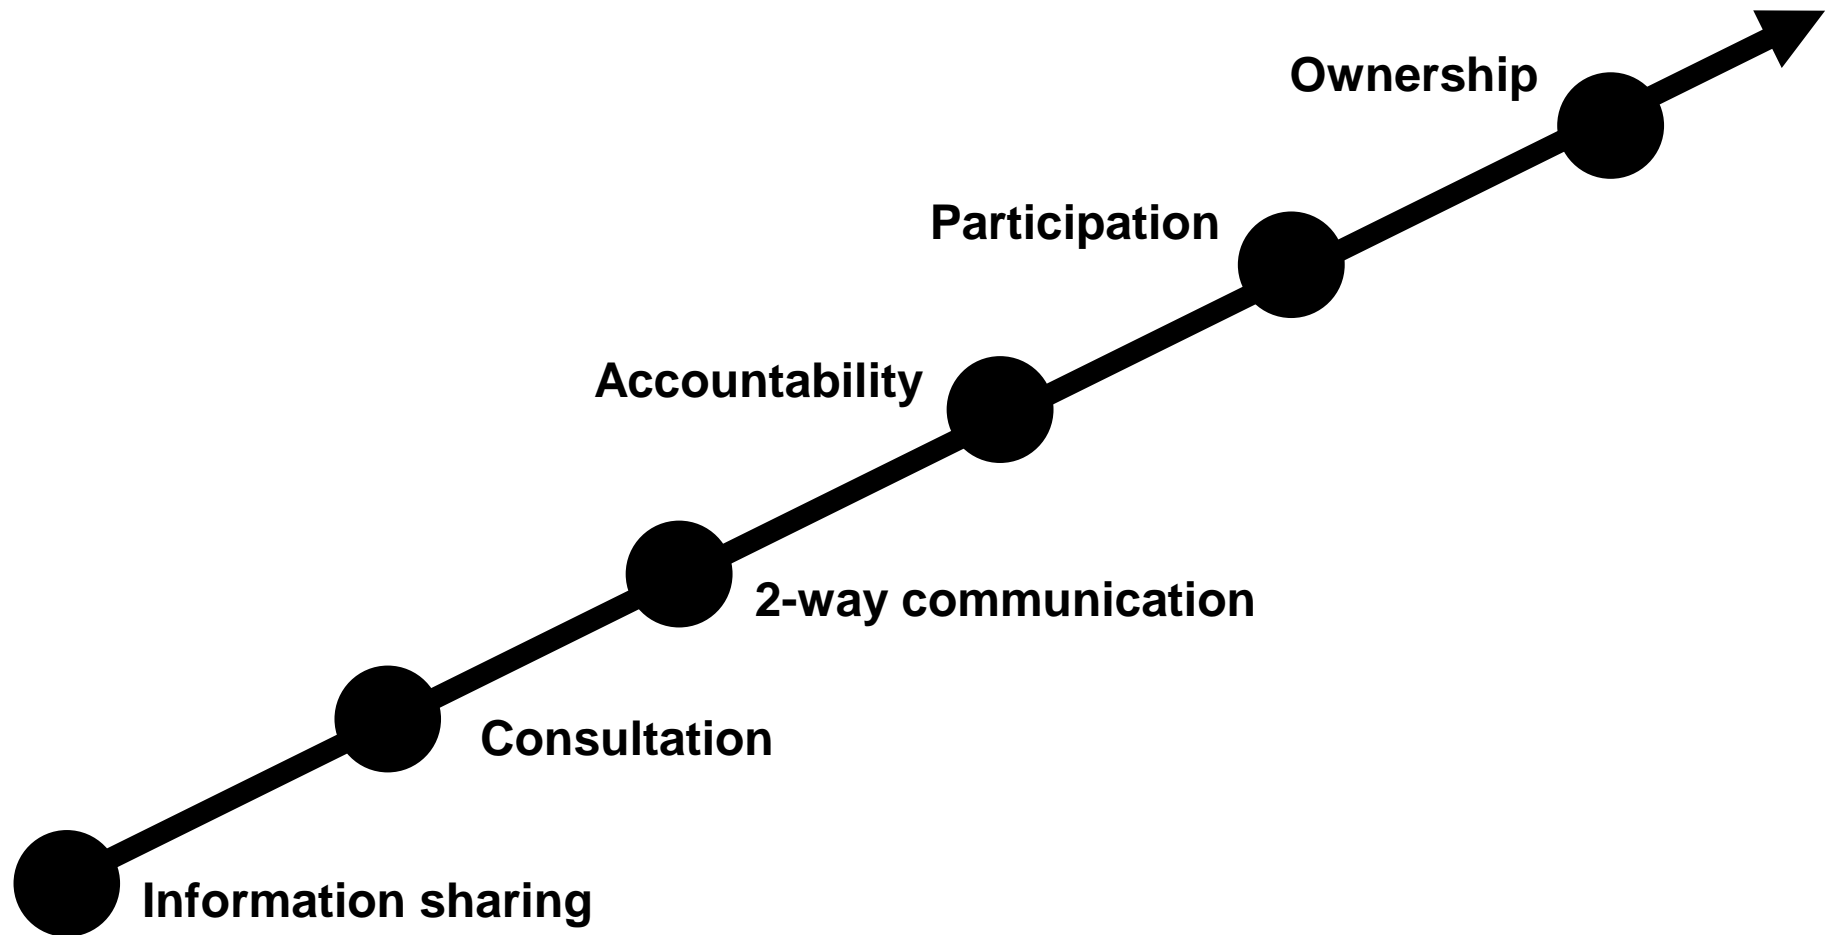

Stakeholder management = impact management

Stakeholder management map: identifying your stakeholder

Levels of stakeholder engagement and management

COORDINATION

Coordination for disaster response

Coordination is a critical success factor for organizing adequate disaster response and recovery as well as successful disaster risk reduction.

Coordination in disaster response

WHO?
WHAT?
WHERE?
WHEN?
HOW?

In the absence of coordination

- Gaps and duplications
- Lack of accurate information
- Delay of delivering assistance
- Inappropriate assistance
- Inefficient use of resources
- Lack of clear definition of roles of responsibilities
- Frustration of providers, officials, survivors

Effective coordination process

- Participatory
- Impartial
- Transparent
- Useful

**No single
humanitarian
agency can
cover all
humanitarian
needs**

**Risk communication,
stakeholder
engagement and
coordination are not
options, **they are a
necessity****

Thank you
