

# Medical Response Management in Disaster

Handoyo Pramusinto  
Emergency Dept. Sardjito Hospital

# SUSTAINABLE DEVELOPMENT GOALS

## SDG's & Disasters

Katrina survivor , 2005 (?)

18.000 in Houston Astrodome

January, 2013

# 311 case

Friday, March 11 , 2011, **8,9 Magnitude**  
the most powerful ever earthquake in Japan and  
resulting tsunami devastated parts of northern Japan  
( *coastal area Tohoku and southern Hokkaido* )

22.000 death & missing

# Great East Japan Earthquake

- Quake intensity registered at 5-lower in Musashino City
- Felt the severe shock of the earthquake on the 8<sup>th</sup> floor of our hospital

March 11, 2011

Information Gathering Section

Establishment of Disaster  
Management HQ

# Key Factors for Systematic Response for Large-Scale Accidents and Disasters

Preparation for mobilization to disaster sites March 11, 2011

A. KATSUMI Musashino Red Cross Hospital

# In fact three distinct disasters

**Massive scale earthquake** with major urban destruction, disruption of residential and industrial structure, loss over 4.000 lives and many traumatic injuries

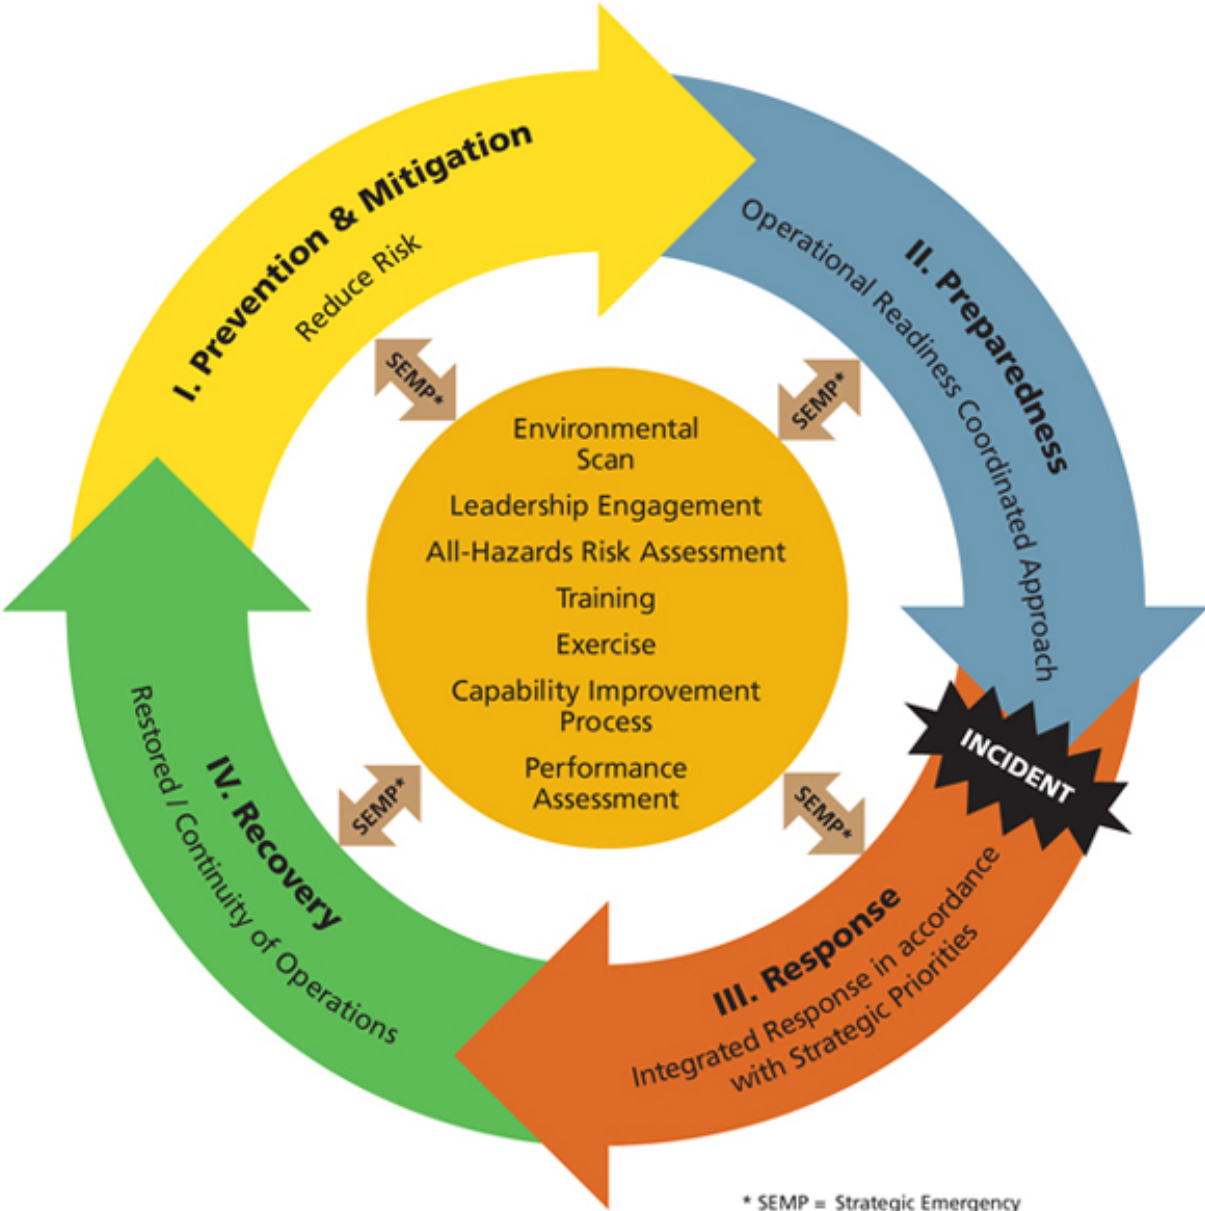

**A series of tsunami** ( material loss, loss of lives )

**Major disruption several nuclear power plants**  
resulting radiation emergency

Disaster Management Cycle

# Emergency Management Continuum

\* SEMP = Strategic Emergency Management Plan

# **4 Elements of Medical Response**

- 1. Search & rescue**
- 2. Triage & initial stabilization**
- 3. Definitive care**
- 4. Medical Evacuation**

# Important Aspects of Medical Response

1. *Response time is **critical***
2. ***Rapid** assesment*
3. *Need **most attention and resources***
4. *Rapid and effective **action***
5. ***Save lives**, protect health and stabilize situation*
6. ***Avoid** making the emergency worse*

85-95 % survivor extricated within **24 hours**

# Prehospital Response:

## *organizational structure*

- **Incident Command System:**
  - **Incident Command**
    - Overall responsibility of event
  - **Operations Section**
    - Manages all tactical activities (**police, fire, medical**)
  - **Planning Section**
    - Collect and analyze data of event, develop plans
  - **Logistics Section**
    - Provide equipment for operations
  - **Finance Section**

# Phases of Response

- **Activation:**
  - event is first discovered
  - Scene assessed
  - Command established
- **Implementation:**
  - Search and rescue
  - Triage
  - Stabilization
  - Transport
  - Definitive management of patients and scene

# Phases of Response

- **Recovery**
  - Withdrawal from scene
  - Resume normal operations
  - Debriefing
  - Analysis of event

# The Disaster Site – How is it organized?

- Scene secured
- Command Post
- Staging area for incoming personnel and supplies
- Landing Zone
- Casualty collection point
- Morgue

## Emergency Support Function No. 8 Menu of Functional Areas<sup>20</sup>

Assessment of health and medical needs

Health surveillance

Medical care personnel

Health and medical equipment and supplies

Patient evacuation

In-hospital care

Food/drug/medical device safety

Worker health/safety

Radiologic/chemical/biologic hazards consultation

Mental health care

Public health information

Vector control

Potable water, and wastewater/solid waste disposal

Victim identification/mortuary services

Veterinary services

**Veterinary services**

# Triaging Patients

- Basic goal is to do the **most good** for the **most people**
- Priority is given to the **most salvageable** patients with the **most urgent problems**
- Transport patients first who have problems **treatable in hospital but fatal in the field**

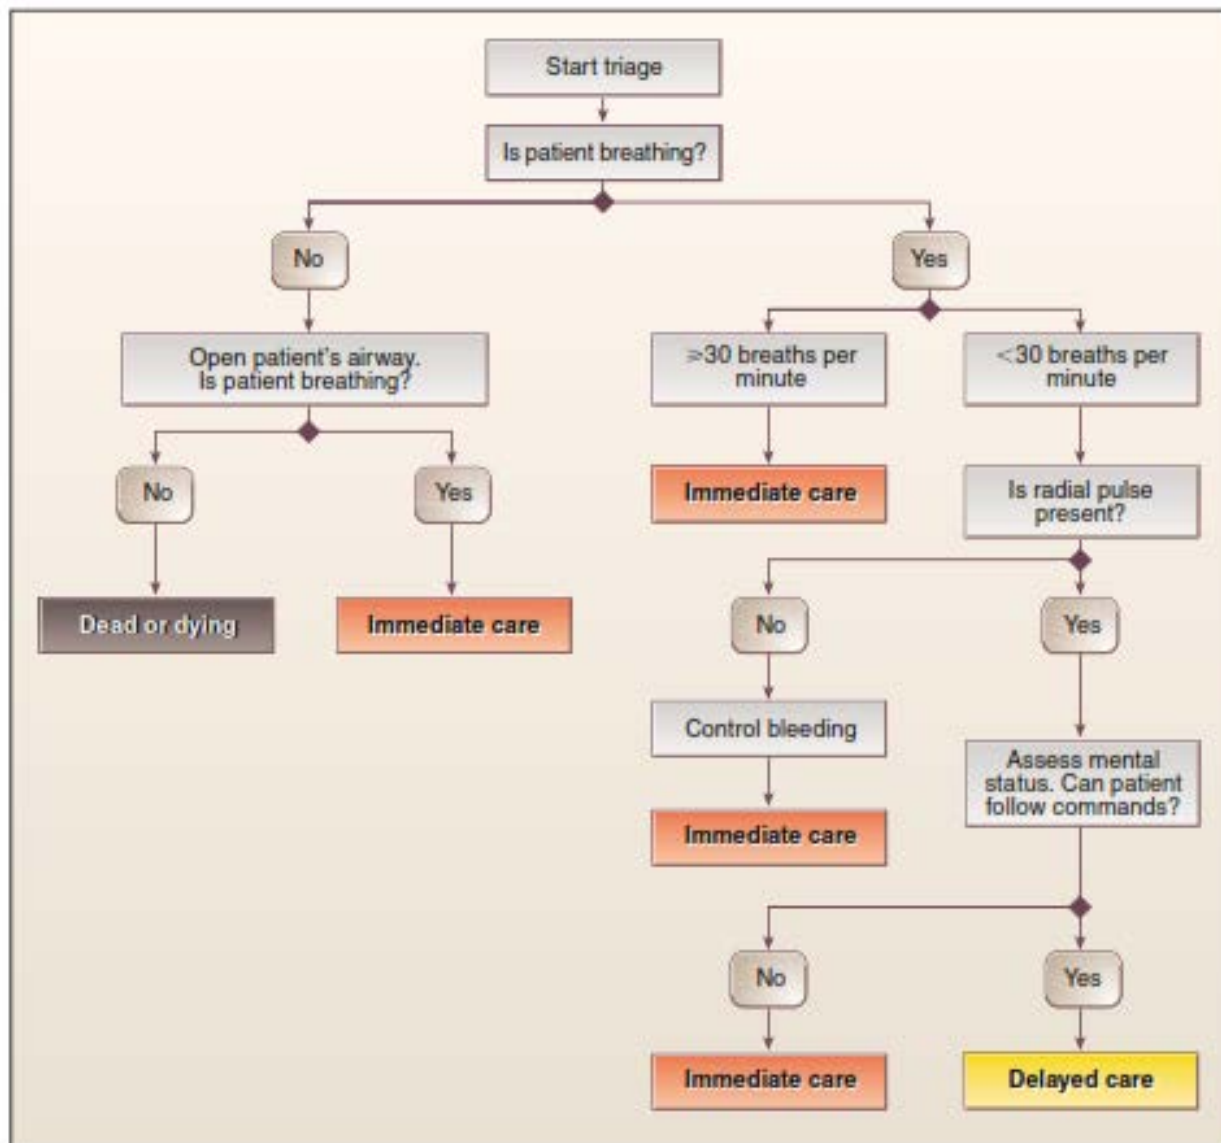

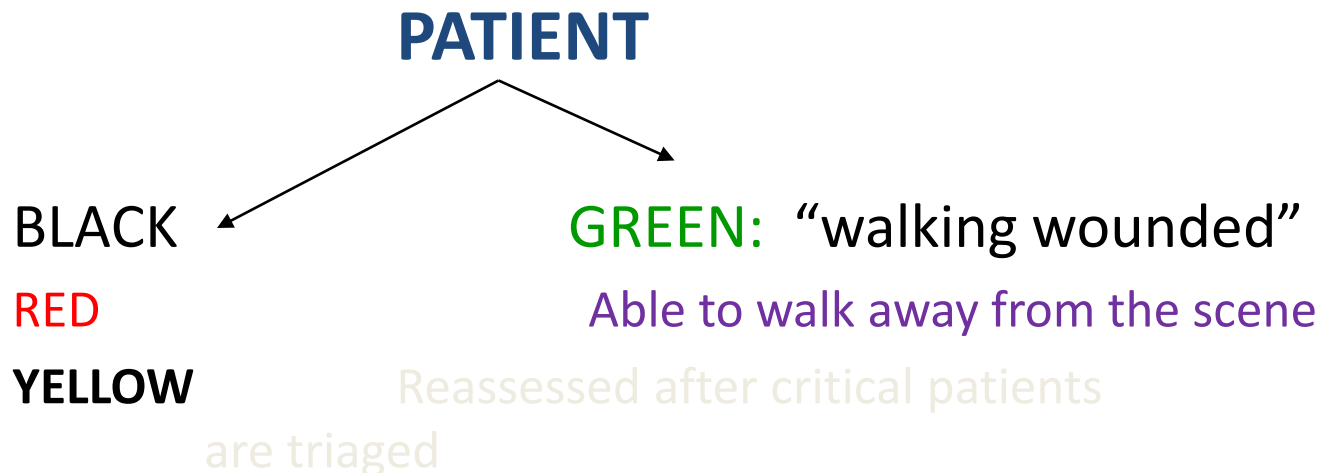

Figure 1. The Modified Simple Triage and Rapid Treatment System.

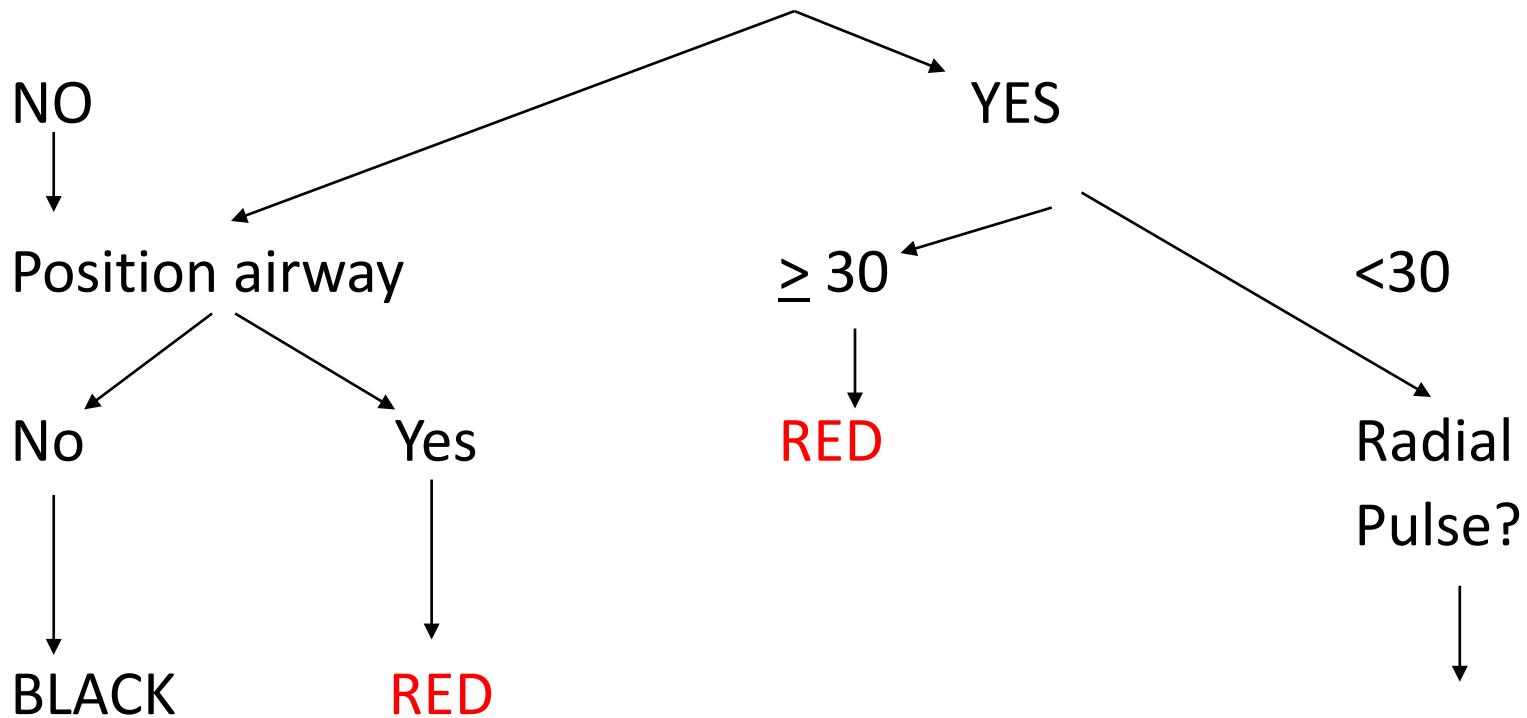

# START protocol (Simple Triage and Rapid Treatment)

- Based on the **respirations, radial pulse, and mental status**

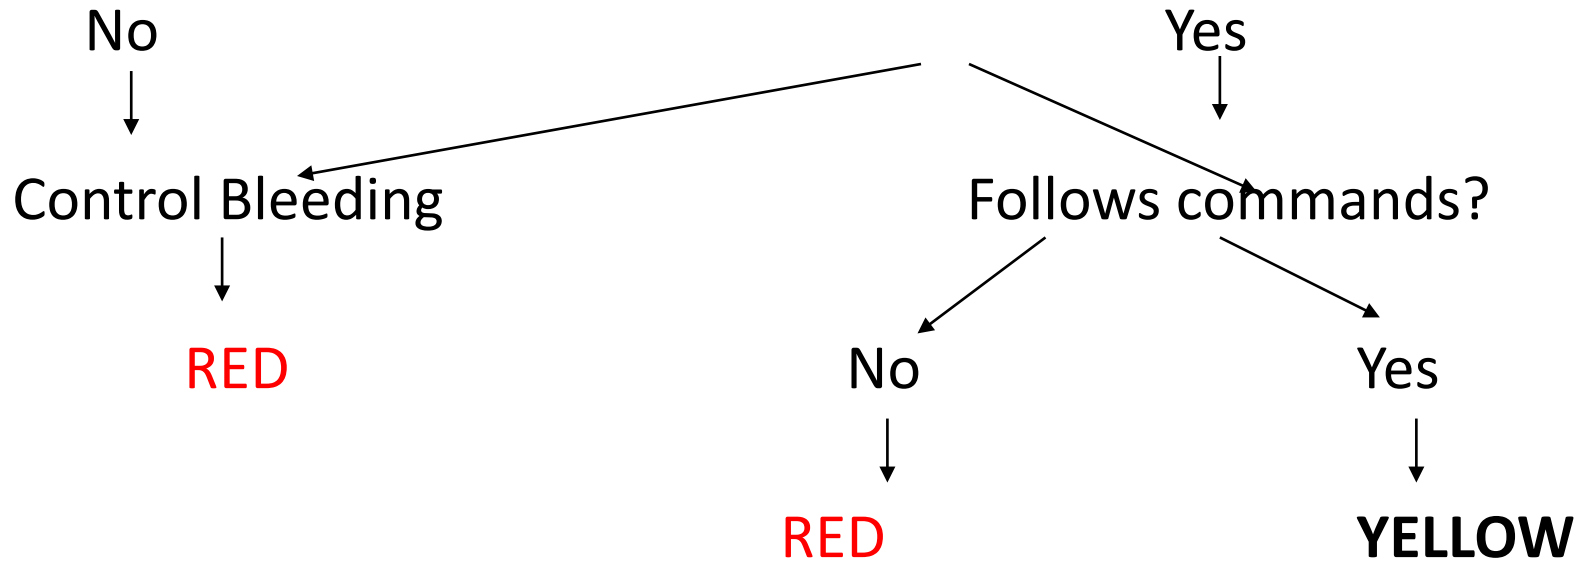

# START TRIAGE

## Respirations?

# START TRIAGE

## Radial Pulse?

# SAVE TRIAGE

- Used when treating multiple patients and there is a delay in accessing definitive management
- 3 categories of patients:
  - Will die regardless of how much care is received
  - Will live whether or not they receive care
  - Will benefit from field interventions

# Patient triage

- Only 70 % sensitive
- Casualties require frequent reassessment and retriaging as appropriate

Figure 2. Operations of a Disaster-Medical-Aid Center.

As indicated earlier, this diagram also applies to the Simple Triage and Rapid Treatment system. Dead or dying casualties should

# First steps in the ED after disaster notification

- **Discharge as many** patients from the ED as possible
- **Quick inventory** of existing supplies
- **Stock extra supplies needed** for patient treatment and to restock ambulances that will return to the disaster scene

# Role of the ED during disaster

- **Receiving area** for patients
- **Decontamination**
- **Triage**
- **Stabilization**
- **Initial treatment**

# Role of the physician in a disaster

- Medics are **best trained for** initial triage, stabilization and transport
- **Only physicians** trained to work in the field should do so
- Physicians should be sent to the field only if there is a **surplus** in the hospital
- Provide **definitive care** in the hospital setting

# How to optimize disaster care

- Have a **pre-made** plan
- Have **clear role** definitions
- Have a **clear chain** of command
- **Clear communication**
- **Practice**

**Factors** that *negatively impact* of effectiveness of disaster response :

1. **Poor coordination** and lack of warning system
2. Very **slow response** time
3. **Limited number** of trained and dedicated clinicians
4. **Lack of SAR** system and equipment
5. Poor community **empowerment** and participation

# Criteria to evaluate healthcare facility's

- Current **disaster planning** strategy
- Bed **capacity**
- **Surgical** capacity
- Blood **transfusion** resources
- **Supplies** of medicine and equipment
- **Staff** availability
- Staff **training**
- **Communication** facility
- **Transport** availability
- Disease **surveillance and control**

# KEY ELEMENTS OF INTELLIGENT EMERGENCY RESPONSE

- Communication
- Evacuation
- Mass Care
- Search and Rescue

## KEY ELEMENTS OF INTELLIGENT EMERGENCY RESPONSE

- Emergency Medical
- Emergency Transportation
- Local, Regional, and International Assistance

# Go Bags

**Thank You**

for your attention
